

**CS-435**

spring semester 2016

## Network Technology & Programming Laboratory

University of Crete  
Computer Science Department

**Stefanos Papadakis & Manolis Spanakis**

# CS-435

## Lecture #1 preview

- About the Course
  - Goals
  - Requirements, Who's who & formalities
- The course lecture topics in a nutshell
- A small flavor of the lab assignments

# Course Goals

- Attain advanced knowledge in selected topics introduced in CS-335
- Become familiar with current Network Technologies
- Gain hands-on experience in using commercial products
- Discover textbook problems as they emerge in a networking laboratory
- Learn to provide solutions

# CS-435 spring 2015

- Lectures: Stefanos Papadakis & Manolis Spanakis
- Lab TAs: Manolis Sourligas
  
- Course Area: Telecommunications & Networks
- Credits: 4
- Lecture Classes: H.208 Tue & Thu 18:00-20:00
- Lab Sessions: A.101 Fridays
- web: <http://www.csd.uoc.gr/~hy435>
- mailing list: [hy435-list -\(AT\)- csd.uoc.gr](mailto:hy435-list-(AT)-csd.uoc.gr)
- course email: [hy435 -\(AT\)- csd.uoc.gr](mailto:hy435-(AT)-csd.uoc.gr)

# CS-435 spring 2015

- CS-335: Computer Network Systems is required
- This is a course that is based on the networking laboratory experience
- There is an assigned 2 hour lab interaction with the TAs, but the bulk of your work is done by you offline
- Lab assignments & their oral exam are mandatory
  - you fail the course if you fail in more than 2

# Study Material

- **Computer Networks: A Top-Down Approach Featuring the Internet**, 4th ed. J. Kurose and K. Ross, Addison Wesley, 2008
- **Computer Networks**, 4th ed. A.S. Tanenbaum, Prentice Hall, 2002
- **Communication Networks : A First Course**, 2nd ed. J. Walrand, Mc Graw Hill, 1998
- **Data and Computer Communications A First Course**, 8th ed. W.A.Stallings, Addison Wesley 2007.

# Study Material

- Whatever is provided on the course web-page:
  - Research Papers
  - Technology White-papers
  - Vendors' Product Manuals
- Whatever is related and you can get your hands on!
- CAUTION: Wikipedia may be a nice starting point for look-up & quick reference, but hardly good for study.

# Laboratory Assignments

- There are **8(9) lab assignments** scheduled
- Each assignment has a Tue → Thu **9** day work-cycle.
- Assignments are worked by **2-member** teams
  - Each **team** delivers a **report** per assignment
  - Each **team member** takes an **oral exam** per assignment
- Extensions will be provided **only** under extraordinary circumstances

# Laboratory Sessions

- TA next assignment reading
- Oral exam of the delivered assignment (sometimes just the TA, sometimes the TA and the lecturers)
- 9 total lab sessions
  - 1 introductory/tutorial
  - 7 for the exams & assignments TA reading
  - 1 for backup

# Quick Lab Assignments Overview

- ❖ Internetworking introduction – addressing & rudimentary throughput measurements
- ❖ Packet forwarding, ARP & sniffing – VLANs
- ❖ Sockets Programming: UDP/TCP MSS - MTU understanding congestion control
- ❖ CIDR / Routing Protocols
- ❖ QoS / traffic priorities - using/understanding the traffic classes
- ❖ Simulation on GNS3
- ❖ 802.11 layer 1 & 2 issues: Interference / Throughput
- ❖ 802.11 layer 4+ issues: TCP / QoS

# Quick Course Overview

- Switched Networks
- OSI Layering, Active Devices
- Internetworking, Packet Forwarding, Addressing
- IPv4, IPv6
- Hierarchical Routing
- UDP / TCP

# Quick Course Overview

- TCP Congestion Control
- Socket Programming
- VPNs, IPsec
- NAT
- Software Defined Networks (SDN)
- Policing / Shaping
- MPLS
- QoS -over wired & -over wireless

# Quick Course Overview

- Wireless Networking (layer 1 & 2)
- 802.11 the whole lettersoup

# Game Rules

- Final Exam: 30% Threshold: 4
- Assignments: 60%
  - ▶ Note: each assignment is graded:
    - 50% based on your written report
    - 50% based on your oral exam
- Class Attendance: 10%
- Midterm or Project: 20% if greater than the Final Exam

- **Example:** final exam 5, assignments 7, attendance 8, midterm 8

$$5 \times 0.3 + 7 \times 0.6 + 8 \times 0.1 + 8 \times 0.2 = 1.5 + 4.2 + 0.8 + 1.6 = 8.1 \Rightarrow$$

$$\text{Grade} = 8.1/1.2 = 6.75$$

# Data Communications

- The fundamental problem of communication is that of reproducing at one point either exactly or approximately a message selected at another point

Claude Shannon (The Mathematical Theory of Communication)

- Science never solves a problem without creating ten more.

George Bernard Shaw (1925 Literature Nobel Laureate)

- It is a mistake to think you can solve any major problems just with potatoes.

Douglas Noel Adams (Hitchhikers' Guide to the Galaxy Author)
